

Small-Apartment Eco Step Starter Sheet

Choose one small, reversible action that fits your real space, control, energy, and routine. Progress here means a clear next experiment - not perfection, a purchase, or a guaranteed result.

Use this sheet as a planning aid.

Check local rules, product instructions, household needs, accessibility, and safety before acting.

1 Notice one recurring friction point

Room or routine:

What keeps happening?

When and where does it happen?

What feels like the extra step?

Example: Reusable bags are stored far from the door, so they are easy to forget.

2 Check fit and control

- ☐ I control this change.
- ☐ I may need household agreement.
- ☐ I may need landlord or property approval.
- ☐ It depends on a local service, building rule, or program.
- ☐ It may affect accessibility, safety, pets, children, food, utilities, or shared space.
- ☐ Not sure - research before acting.

What permission, guidance, or research is needed?

Plan one Eco Step

3 Use what already exists

What item, location, or routine is already available?

- ☐ Move it closer or make it more visible.
- ☐ Repair or simplify it.
- ☐ Give it one clear home.
- ☐ Use it differently before buying something new.

Is a purchase necessary now?

☐ Yes

☐ No

☐ Not sure

4 Define one Eco Step

I will make this moment easier by...

Where will the setup live?

When will I try it?

Maximum time or effort I want to spend:

Permission or research needed first:

5 Observe without scoring yourself

- ☐ The action was easier to notice.
- ☐ Something became harder, unsafe, inaccessible, or inconvenient.
- ☐ I need more information before continuing.

Decision:

☐ Keep

☐ Adjust

☐ Stop

☐ Research

One note for the next attempt:

6 Optional next step

- ☐ Repeat the same setup.
- ☐ Adjust one part.
- ☐ Choose a different problem.
- ☐ Stop here - no next action is required.

Eco Step note

An Eco Step is an ETLH planning concept, not a scientific score or certification. Choose what fits your home and stop when it does not.
